

Job Title: Emerging Tech & Creative Associate (AI-Native)

Role Type: Internship or Entry-Level (New Grad)

Location: Remote

Compensation: internship or \$20 ph (for qualified applicants) + Rapid Skill Acquisition & Portfolio Development

The Opportunity: Don't Just Join a Team. Build the Future.

Are you a recent grad who feels "stuck" in a box? Most entry-level roles ask you to do one thing repeatedly. We're doing the opposite. We are looking for a **Foundational Generalist**—someone who wants to touch every part of a modern business, from the backend code to the frontend aesthetic.

In this role, you won't just be "using" tools; you will be building systems. You will leave this position with a portfolio that makes you a "Triple Threat" in the job market: **Technical (Coding/AI), Creative (Design), and Strategic (Project Management).**

What You'll Master (The "Stack")

We don't expect you to be an expert on Day 1, but we expect you to be a "Fast Learner." You will gain hands-on experience in:

- **AI Agent Orchestration:** Learn to build and deploy AI agents to automate workflows, research, and content creation.
 - **Full-Stack Development:** Write real code and build functional, beautiful websites from scratch or using templates. Develop customized plug-ins for websites.
 - **SEO and Web marketing:** Learn how to build state of the art SEO solutions, latest tricks and trends to drive Organic Traffic with Zero or minimal marketing spend.
 - **Online Business:** Learn about online businesses and how to build one from round up.
 - **Business Processes:** Learn how other organizations operate and help improved their processes and business outcome.
 - **Digital Craftsmanship:** Transition from a "hobbyist" to a **Graphic Artist**, mastering visual communication and brand identity.
 - **Project Architecture:** Learn how to lead a project from a messy idea to a finished product using modern PM frameworks.
-

Your Mission

- **Build & Deploy:** Help us design and launch web-based solutions and internal tools.
 - **Automate:** Identify "boring" tasks and build AI agents to handle them.
 - **Create:** Design social assets, UI/UX mockups, and brand materials that stand out.
 - **Own:** Take full ownership of small-scale projects, managing timelines and stakeholders.
-

Who You Are

- **The "Figure-It-Out" Factor:** You don't wait for a manual. You Google, you experiment, and you iterate.
 - **New Grad / Senior:** You've recently finished (or are finishing) your degree and are hungry for real-world "dirt-under-the-fingernails" experience.
 - **Tech-Fluent:** You have a baseline interest in coding (Python/JS/HTML/CSS) and are already playing with LLMs (ChatGPT, Claude, or others).
 - **Design-Eye:** You have a taste for good design and want to learn the professional tools to execute it.
-

Why This Beats a Corporate "Coffee-Run" Internship

1. **Portfolio over Pedigree:** You will build real products you can show future employers.
2. **Mentorship:** You'll work directly with the founder, team and clients, getting feedback that a 500-person HR department could never provide.
3. **Future-Proofing:** While others are learning legacy systems, you'll be mastering the AI-driven workflows of 2030.

How to Apply: Don't just send a boring resume. Send us a link to something you've built, designed, or written that you're proud of. Tell us one thing you want to learn in your first 90 days. Use this link to apply: <https://www.julietadam.com/careers/>
